Malaysian invention's global reach

Group signs MoU with Chinese firm intent on buying its multi-purpose rescue vehicle

story by
LIM WING HOOI

winghooi@thestar.com.my

LOCAL startup WKL One Group, which has been working to commercialise its multi-purpose rescue vehicle (MRV), signed a memorandum of understanding (MoU) with China-based fire protection and search-and-rescue equipment supplier Wellcrown International Resources Ltd.

WKL One Group managing director Datuk Azman Yusoff said the MoU marked a milestone in the company's progress to showcase Malaysia's invention to the world.

"Our MRV's multi-tasking rescue functions are ready to serve the world when natural disasters strike," he said.

Some of the capabilities of the MRV include being able to operate while submerged in water up to 1.8m, using underwater sonar to navigate. It also has a water-proof

generator producing 30kW of electricity and the vehicle generates enough torque to pull and push up to 70 tonnes of equipment.

Witnessed by Deputy Science, Technology and Innovation (Mosti) Minister Datuk Dr Abu Bakar Mohamad Diah, the event in Putrajaya saw the attendance of representatives of various companies in the search-and-rescue equipment industry, including from Indonesia, Canada, the United States, Taiwan, Hong Kong and Australia.

The MoU states Wellcrown's intent to purchase MRVs when they are commercially ready.

"The units must be ready for vehicle certification and testing. Our factory and assembly lines must also be ready for site visit and inspection by them (Wellcrown), which we anticipate will be at end of the year," said Azman.

Revealing that the company was currently looking for a manufacturing site of about 4ha in Malacca, he said they were also looking for funding from both government and private sectors.

(From left) Low, Azman, Dr Abu Bakar, Wellcrown International Resources Ltd president Bai Yun Fei and Wellcrown International Resources Ltd business development vice-president Leelee Khoo after the MoU signing ceremony.

"The project will require about RM120mil. We intend to sell each unit for about US\$500,000, depending on the specifications. And we see China and Europe as potential markets," he said.

The MoU also includes appointing Wellcrown as the main distributor and strategic partner in China, Indonesia, Vietnam, South Korea,

Hong Kong, Singapore and Taiwan.

"Wellcrown will exclusively undertake all sales, marketing and support within those territories," Azman said.

The MRV will also be fitted with Wellcrown's fire-fighting, tactical, search-and-rescue equipment, he added.

The MRV is the brainchild of

founder and technical director Datuk Seri Low Wai Koon, who started his working life as a mechanic in 1988 after having dropped out of school to pursue his interest as a car mechanic.

Between 2009 and 2010, the company produced three prototypes with the assistance of a RM2.2mil grant from Mosti.

Firefighters on red alert

Fire and Rescue Department monitoring current dry spell

By ROYCE TAN

roycetn@thestar.com.my

PETALING JAYA: The Fire and Rescue Department is keeping close tabs with the Malaysian Meteorological Department on the dry spell.

Its director-general Datuk Wira Wan Mohd Nor Ibrahim said it was just the early stage of the dry season and it was not expected to last long.

"There are a few occurrences of forest fires but it is not that serious.

"We have enough personnel to face any situation. We're monitoring closely.

"If the situation becomes more serious, I will get the personnel nationwide to be on standby and maybe we will even freeze their leave until everything is under control," he said yesterday, adding that there were around 14,000 firemen in service nationwide.

In terms of equipment, Wan Mohd Noor said the department was also well prepared with additional pumps, hoses, generator sets and lighting systems purchased last year.

He advised members of the public to stop open burning and smok-

ers not to simply throw their cigarette butts.

"A fire will not start by itself. Most of the time it is due to human activities.

"The fire spreads really fast during this season especially so let's be more responsible to prevent this from happening," he said.

On Sunday, *The Star* reported that the country's fire alert map was covered almost entirely in red - the highest warning - for the coming days.

A map of the Malaysia Fire Danger Rating System, under the "Fine Fuel Moisture Code", has

nearly all parts of the peninsula in red, with the exception of a few places, including Kuching, which ironically, is currently hit by floods.

Although there may be occasional rains, these are not heavy enough in the dry season.

Red represents extreme ease of ignition and flammability of grasslands and bushes.

Large portions of Sarawak and Sabah are now also covered in red on the map.

Only a few parts of the peninsula's east coast, south of Sarawak and northern Sabah are spared.

State dept freezes all leave for firefighters

KOTA KINABALU: The leave of 900 firefighters in Sabah has been frozen in light of the spike in open burning throughout the state due to the ongoing dry weather.

The number of open burning incidents – including forest and bush fires – had jumped from 188 in January to 431 between Feb 1 and Feb 24, said state Fire and Rescue Services Department director Nordin Pauzi.

According to the department's statistics, the highest number of calls on open burning were in the west coast Papar and interior Keningau districts totalling 66 and 65 respectively in February.

The department also responded to 41 calls on open burning within the Kota Kinabalu area during the same period, 39 calls in Penampang and 36 reports in Papar.

"The open burning around Kota Kinabalu and Penampang are usually near housing area while those in Papar and Keningau are adjacent to farms," Nordin added.

He said most of the open burning in Sabah comprised bush fires totalling 218 in February, forest (150) and illegal waste burning (14).

The Meteorological Services Department had classified large swathes of Sabah, Sarawak and the peninsula as being susceptible to grasslands and bush fires due to the dry weather.

THE Consumers' Association of Penang (CAP) is distressed by the recent news a group of hackers had hacked into the systems of both government and private hospitals and stolen personal health data of tens of thousands of people – data which are then sold to pharmaceutical companies through information-selling syndicates.

The implications of this cyber theft are terrifying because our government and various agencies are trying to get everything (banking transactions, filling forms, making complaints etc.) to go online as part of our green initiative. However, there is a big chance we don't really have the security to back this move as made obvious by this incident.

A news report has stated that 10,000 cyber crime cases are reported each year, with losses equalling more than RM2.7

million, and the crimes largely involve online scams and hacking of computer servers.

This breach in privacy is no laughing matter and must be taken seriously.

Many people may not realise this, but information related directly to them has been obtained against their will and is now being bartered among unscrupulous people for profit.

Ultimately, drug companies are at the end of this chain — using this unlawfully obtained information to make more money out of the victims.

Also consider we cannot be certain pharmaceutical companies are the only ones buying this information.

There may be companies in other sectors that can benefit from having this information — insurance companies, for example.

This incident should be a clear indication to us if a group of hackers can overcome the security in government and private hospitals so easily to steal personal health data, they can also steal some other set of personal data, like our banking information, and sell it to the highest bidder.

This could already be happening, but has not been detected yet.

Despite this, the agencies responsible for our cyber security have put the onus on the public, be it businesses or individuals, to report it if they notice their computer servers being tampered with so that they can stop data theft.

This is obviously not sufficient to handle the issue.

By the time anyone realises there is something wrong with their computer servers, it's probably already too late.

In light of this, CAP suggests that:

■ agencies such as the Cyber Forensics Intelligence Centre (CyberFIC), **CyberSecurity Malaysia (CSM)** and the Malaysian Communication and Multimedia Commission (MCMC) nip this problem in the bud by tracking and stopping hackers;

■ companies, such as the pharmaceutical companies in this case, that buy this information should be charged with committing a crime of possessing personal data illegally. If there is no market for unlawfully obtained personal data, then stealing the information becomes redundant; and

■ MCMC, CyberFIC and CSM, as the responsible agencies, need to beef-up cyber security immediately.

CM says Abu Bakar can use MP funds to fix potholes

MALACCA: Tangga Batu representative Datuk Dr Abu Bakar Mohamad Diah, who took to social media to voice his frustration about potholes in a road in Bukit Rambai near here, was yesterday told that he could use his allocation to repair them.

Chief Minister Datuk Seri Idris Haron said Barisan Nasional members of parliament had been allocated funds for remedial work and they did not have to wait for repairs to be carried out by government agencies.

He said the issue of potholes, which drew the ire of the deputy science, technology and innovation

minister, could have been resolved without highlighting the matter on Facebook.

Datuk Dr Abu Bakar Mohamad Diah

"Abu Bakar can use his MP allocation to repair the potholes if the district office, local authority or the state de-

velopment office is slow in taking action.

"There are many ways to address such issues and it is up to the representatives to pick one," he said after presenting 487 civil servants with excellent service awards here yesterday.

Abu Bakar was shown pointing to potholes in pictures uploaded on his Facebook page on Saturday. There was also a picture of him sitting in one.

Idris said Abu Bakar's actions could give the wrong impression that even as a deputy minister, he did not have a channel to meet government officials to solve people's problems.

"A good thing is we know that a *wakil rakyat*, who is concerned about the people, is willing to lie down, roll over and sleep in potholes."
