KUALA LUMPUR, Feb 22 – The Malaysian Industry-Government Group for High Technology (MIGHT) celebrated its 29th anniversary with the burying of time capsules that contained the recordings and messages of its joint chairmen.

The contents of both capsules comprise joint chairmen Prof Tan Sri Dr Zakri Abdul Hamid and Tan Sri Dr Ahmad Tajuddin Ali's aspirations for MIGHT and the nation and will be unveiled in 2033 when MIGHT marks its 40th year, the think tank said in a statement.

MIGHT is a market-driven technological partnership think tank and provides a platform for government, industry and academia to come together to share their respective expertise using science and technology to promote industrial development and nation-building.

As a think tank, MIGHT continues to undertake key initiatives for both the industry and government sectors.

It is also a forerunner in the areas of Foresight and Smart Cities development with various industry blueprints in the works.

These join the ranks of other industry blueprints which have since seen commendable success, including the National Aerospace Blueprint, National Pharmaceutical Blueprint, and National Herbal Industry Blueprint, among others.

"International collaborations will feature prominently in MIGHT's foray into its next decade.

"It is presently actively exploring the expansion of the innovation value chain in Spain, Turkey, and Thailand.

"This builds on the success of many previous international collaborations, the latest being the Newton Ungku Omar Fund with the United Kingdom," said MIGHT.
